**A DESIGN
SO UNIQUE, IT WAS
CREATED FOR YOU**

Royal

MODULAR PLATE

Especially (but not only) when it comes to small spaces - which are getting smaller and smaller - attention to the choice of each piece of furniture is paramount. For this reason, in many cases, it is often more effective to design unique items to make the most efficient use of each square centimeter.

SAFETY IS OUR FIRST

HIGH INSULATION RESISTANCE

Rigga wires have an allowable current-leakage limit that is 50 times lower than the prescribed international safety norms. International safety standards specifies that current leakage limit in hand held equipment is considered to be safe if the value is not more than 0.75 mA. Rigga cables, with technology, incorporate insulation of high quality which ensures that current leakage level is as low as 0.01 mA, which is much below the prescribed limit. Rigga cables have been certified by the Central Power and Research Institute (CPRI) a premier laboratory recognised by the Government of India. Safety from electrical shocks – Electric shock occurs when a body-part comes in contact with a bare conductor of poor insulated wire. Higher insulation resistance protects against electric shock.
